Cytoarchitecture of the Human Brain Stem.

They used letters to categorize the architecture, e. Finally, an analysis of neuronal morphology, in Nissl stained and Golgi impregnated tissue, provides evidence of multiple neuronal classes within each nucleus and further that these neurons demonstrate a precise geometric arrangement depending on the nucleus that is suggestive of isofrequency laminae.

Cytoarchitecture of the human superior olivary complex: Medial and lateral superior olive

Keywords: endothelial; heterotypic; mesenchymal stem cells; microglia; neural-vascular interactions; pluripotent stem cells. Surrounding the principal nuclei are a number of periolivary nuclei PON that vary significantly between mammalian species but function in multiple aspects of hearing. However, little is known conclusively regarding the detailed organization of the human superior olivary complex.

Olszewski and Baxter's Cytoarchitecture of the Human Brainstem: BÃ¼ttner

A working model of the dynamic interactions between neural progenitor cells NPCs and brain microvascular endothelial cells. Brain Neurotrauma: Molecular, Neuropsychological, and Rehabilitation Aspects.

Cytoarchitecture of the human superior olivary complex: Nuclei of the trapezoid body and posterior tier

The sheet size permits reproductions in considerable detail, blurred in physically smaller articles and monographs. Schematic of the proposed signaling in spheroid human mesenchymal stem cells MSCs. Although the PON have been studied in numerous laboratory animals, these nuclei have not been delineated in human.
