The greater energy content and broad spectrum of the boomer allow significantly greater depth returns. The material properties of lower units can be found in succession from the reflections of deeper layers.

Source performances were evaluated based on analyses of signal penetration, frequency content and repeatability, as well as the comparison of stacked sections.

Geophysical Methods, Exploration Geophysics » Geology Science

As the applied layer-based inversion approach fits our travel time data equally well as traditional smooth inversion approaches, it represents a feasible mean to summarize the structural complexity often present at such sites.
