Family Theory

The effects of the intervention also generalized to positively influence parent and child behaviours during a shared book reading activity, even though this activity was not a specific focus of the intervention.

Family Characteristics Have More Influence On Child Development Than Does Experience In Child Care

When movements over approximately three years of late adolescence and young adulthood were examined longitudinally from data that assessed identity status in categorical terms, the mean proportion of adolescents making progressive identity status changes D—F, D—M, D—A, F—M, F—A, and M—A was.

5 Theories of Child Development

BOOKS AACAP and David Pruitt.

Child Development, History of the Concept of

Study researchers periodically visited each child and family at home, in child care if used, and in a laboratory playroom at each of the 10 sites.

The SAGE Encyclopedia of Intellectual and Developmental Disorders

Students are required to earn two for each behavioral science core course in which they are enrolled, for a maximum of six total credits each semester. Furthermore, commitment-making particularly identification with commitment was associated with high self-esteem, high academic and social adjustment, as well as with low depressive symptoms.

Identity Development in Adolescence and Adulthood

The arrival of each additional child has the effect of lowering the family's intellectual environment. In a narrative analysis of identity pathways among women assessed from late adolescence through mid-life, Josselson found a diversity of identity pathways, with achievement and foreclosure pathways tending to be the most stable over time. Efforts to understand why family size should affect intellectual performance have intensified in recent years.
