Spatially

Peat and peatland resources of southeastern Ontario. Tropical peatland extent and C stocks show little temporal variation throughout the study period.

Peatlands of Canada

Clymo's 1984 studies on peat accumulation and peatland growth started a whole new way of thinking of peat accumulation processes.

Chapter 2 Northern Peatlands: their characteristics, development and sensitivity to climate change

Peatlands have arisen on these coasts because a hypermaritime climate sustains abundant precipitation and low evaporation, allowing peat to form directly over the impervious bedrock.

Peatlands of Canada

We estimate that pre-settlement wetlands held up to ~ 3. The most evident is the high water content in the soil. Climate and peat type in relation to spatial variation of the peatland carbon mass in the Hudson Bay Lowlands, Canada.

Update on Canada's Contribution to the Global Soil Organic Carbon Map

Permafrost is also an important feature within peatlands, affecting GHG dynamics.

Peatlands of Canada

Long-term peat accumulation in temperate forested peatlands *Thuja occidentalis* swamps in the Great Lakes region of North America.
