Tailings (Mines and Residue)

This tracking helps us to understand our users better and to improve our website and the information it provides and to maintain and administer the website.

The Tailings Center

Waste occurs in several stages of the mining process and throughout the life of the mine, from the first exploration drilling project to the last processed material before mine closure.

Tailings

Examples are waste rock end dumped into a tailings facility, or waste rock used to create internal berms or retaining walls of a tailings facility. The report outlined specific progress on several areas of the mine site, including stabilizing the tailings containment and impoundment dam and construction of a new access road using waste rock from the site.
