## CIVA Education

His areas of expertise include solid state physics and physical analytics, welding metallurgy, materials testing, nondestructive evaluation NDE , and structural health monitoring SHM , for instance.

## Non

Professional Recognition: On completion of the apprenticeship, the NDT Engineer will be eligible to apply for professional registration as an Incorporated Engineer IEng and membership of the professional body the British Institute of NDT. Demonstration of the accurate detection and identification of loose parts located in close proximity to SG tubes identifies PEC analyzed by MPCA as a potential candidate for SG inspection.

## Nondestructive Testing

Knowing the LISS nozzle proximity can provide an estimate of the time to LISS-CT contact, which could be used to optimize maintenance schedules. In addition, the magnetic signal exhibited an exponential decrease with liftoff. Certification under these standards involves training, work experience under supervision and passing a written and practical examination set up by the independent certification authority.

In industrial sectors the written practices are usually based on recommended practice SNT-TC-1A of the. ## What is Non

In this work pulsed eddy current PEC combined with a modified principal components analysis MPCA was examined as a means of detecting and identifying a variety of loose part materials in close proximity to Alloy-800 SG tubes and surrounding steel support structures. The work presented in this paper is to further advance and develop the patented technology invented by some of the authors. The waves produced, called Lamb waves, then travel through material as an elastic wave.

## **Laser**

The new welding facility is an authorized Accredited Testing Facility ATF under the American Welding Society AWS. Examination of PEC probe response in light of basic electromagnetic diffusion processes elucidates measured transient responses obtained during PEC inspection.

Typical discontinuities that can be identified include quench cracks, grinding cracks, fatigue cracks, overload and impact fractures, porosity, laps, seams, pinholes in welds, and lack of fusion. The recent advances in various machine learning algorithms have solved many similarly difficult classification problems, that have previously been considered intractable. A custom database was created to train the network.
