Emergency department

It was expected that recommendations on changes to the four-hour standard would be in spring 2020, but these proposals have been delayed to later in the year due to the impact of coronavirus Covid-19.

Leading and managing an emergency department—A personal view

However, some patients may complete their treatment at the triage stage, for instance, if the condition is very minor and can be treated quickly, if only advice is required, or if the emergency department is not a suitable point of care for the patient. If you are not sure, ask the triage nurse if you should go to the GP if the ED is busy. The median waiting time for a decision to admit to hospital or discharge or transfer from the ED was 2 h and 59 min Interquartile range: 1 h 55 m to 3 h 49 m with 9.

Emergency Department

Most patients had no investigations ordered or received the combination of simple imaging, laboratory tests, and point-of-care tests. With regards to age, a J-shaped relationship was observed with decreasing odds of breaching up to the age of four years with an average OR 0. So by keeping your hands clean when you come to or are in the ED, you can help protect us all from infection.

Urgent and Emergency Care

You will be assessed and treated if needed to! Keep the Emergency Departments free for emergencies Our emergency departments are open remains open but it is for serious and life threatening conditions. Demands can rise due to increased prevalence of influenza-like illness, associated with colder weather such as asthma and pneumonia, and infectious winter vomiting bugs like norovirus. The ED physical environment has an impact on the flow of care being delivered to her patients.
