He was a member of Chinese Academy of Sciences and The Third World Academy of Science TWAS , Council Member of IZA, President of International Mesosstructured Materials Association IMMA. The symposium addresses near-term fusion devices and long-term reactor technologies, as well. Current interests include polymorph control and the use of physical environments — namely confinement and surface topography — to control crystallisation.

The novelty of the method lies in determining the correspondences in the phase domain using the rectified unwrapped phase maps and triangulating the matched phase values to reconstruct the three-dimensional shape of the object. She has served on a number of editorial boards, including: Macromolecules, Langmuir, Accounts of Chemical Research, and Soft Matter.

Specifically, a mathematical model containing compensation coefficients of the mobile FTMG system is constructed by extending the Tolles-Lawson model. To solve the contradiction between high range resolution and deep depth of field, a fiber-optic beam, called 'beam shunting', is designed. We do hope that after the busy symposium programme, in the evenings you will find some time to enjoy the hospitality of the Hungarian people and visit some of our iconic places.
