## Effects of High Dissolved Inorganic and Organic Carbon Availability on the Physiology of the Hard Coral *Acropora millepora* from the Great Barrier Reef

Natural organic polymers and microbes in natural non- Oceanic water-ways: A.

### Frontiers

Mehrbach C, Culbertson CH, Hawley JE, Pytkowicz RM.

### [PDF] Biogeochemical Processes and Implications for Nutrient Cycling

Decreased abundance of crustose coralline algae due to ocean acidification. Forms of the hydrozoan *Millepora* on a Recent coral reef. Coral reefs under rapid climate change and ocean acidification.

## Effects of High Dissolved Inorganic and Organic Carbon Availability on the Physiology of the Hard Coral *Acropora millepora* from the Great Barrier Reef

Recently, researchers have shown that viruses and parasites like *Cryptosporidium* can be trapped in biofilms.

### Algal Biofilms and Their Biotechnological Significance

While high DOC reduced photosynthesis of A.

### Biofilm

The cycling and fate of terrestrially-derived sediments and nutrients in the coastal zone of the Great Barrier Reef shelf. Biofilm samples collected in February and March had the highest chlorophyll a and total phosphorus concentrations. However, in a well-designed and -maintained tower, the risks of *Legionella pneumophila* are greatly reduced.

### **Effects of High Dissolved Inorganic and Organic Carbon Availability on the Physiology of the Hard Coral *Acropora millepora* from the Great Barrier Reef**

Additionally, manufacturers generally are not obligated to provide the health-care facility with cleaning and disinfecting instructions appropriate for medical equipment use, and the U.
