QUALITY FUNCTION DEPLOYMENT LINKING A COMPANY WITH ITS CUSTOMERS

For well-defined products and market needs it works fine but for radical new products the customer may not even know that they want the product until they see it. The process or tool they are using is called Quality Function Deployment QFD.

Quality Function Deployment

In many cases, a scale of 1 to 5 is used for the ranking, with 5 representing the highest level of customer satisfaction. It is a complimentary method for determining how and where priorities are to be assigned in product development. Quality Function Deployment is a systematic approach to design based on a close awareness of customer desires, coupled with the integration of corporate functional groups.

What is Quality Function Deployment (QFD)?

Several articles and translations of Japanese examples appeared shortly after its introduction which were based largely on observations of Japanese applications.

Quality Function Deployment

Companies are continuously seeking for methods to provide them. By using voting and linear programming techniques, the proposed approaches consolidate individual preferences into a group consensus in situations starting with or without partial agreed criteria sets.

Quality function deployment

Day Includes bibliographical references and index.

Quality Function Deployment (QFD)

However, the meaning of the matrix is significantly different, as the QFD2 matrix focuses on translating functions into physical components.

QFD

This information may also be used for creating Work Instructions, Inspection Sheets or as an input to. What is the History of Quality Function Deployment? Manufacturability is another key requirement, since the design garment should eventually be produced in large quantities over the size range for the soldiers; moreover, it should be compatible with standard issue clothing and equipment. Specifically, we modify the nominal group technique to obtain customer requirements, and integrate agreed and individual criteria methods to assign customer's importance levels in general situations where some members in a team have an agreed criteria set while others prefer individual criteria sets.
