HA is biocompatible, biodegradable, muco-adhesive, hygroscopic, and viscoelastic. Bone biopsy specimens obtained from representative cases will be process for qualitative and morphological analysis. Tran is an associate professor and graduate program director, faculty of dentistry, McGill University, Montreal.

Role of Platelet Rich Fibrin and Platelet Rich Plasma in Wound Healing of Extracted Third Molar Sockets: A Comparative Study

Breaks in the submucosa allows to microorganisms to invade this tissue district leading to mononuclear-infiltrating cells-mediated inflammation response; e tissue re-epithelialization. Pain was measured using a 10-cm visual analog scale, with no pain and worst pain ever as anchors. J Islamic Soc Dentistry 2004; 16 2 : 49-55.

Clinical Studies

After 24 hours, the level of pain was measured by using the numerical criteria of the Visual Analog Scale VAS and the data were analyzed using SPSS software version 18. Røynesdal et al reported that LLLT 830 nm; 40 mW; 6 J had similar results to those observed by the López-Ramírez et al study. Halitosis will be quantified by measuring the thresholds of volatile sulfur compounds hydrogen sulfide, methyl mercaptan and dimethyl sulfide.

The procedure can diminish the patients' quality of life in the first few days after the surgical intervention because of pain, swelling, and impeded capacity to open the mouth due to inflammation. A bactericidal antibiotic B-lactam drugs or metronidazole should not be used simultaneously with a bacteriostatic agent tetracyclines because the bactericidal agent exerts activity during cell division that is impaired by the bacteriostatic drug.
