Papermaking technology

This study is aimed to utilise green chemistry approach during bleaching of one of the abundantly used agro residue wheat straw for improving the quality of bleaching effluent and pulp properties. The effect of feed concentration, feed flow, and volumetric fine fraction flow was evaluated.

Study explores diversity

This indicates a strong interest by this Japanese company to invest and develop its own technology.

Study explores diversity

To produce paper, the pulp is then screened, cleaned, and mechanically refined. Raw materials used in the production of paper and board are derived from sustainable sources.

Environmentally Friendly Production of Pulp and Paper

Sustainable development and its implications for the forest products industry.

Research & Development

LGP2 develops research on green processes with an emphasis on material and energy saving and on sustainable chemistry for new functional materials. It contains goals and recommendations for public and private sector players interested in encouraging the broader use of metrics to improve industrial environmental performance and those interested in addressing the tough issues of prioritization, weighting of metrics for meaningful comparability, and the longer term metrics needs presented by sustainable development. Germany and the United States are the leading paper importing and exporting countries.

Environmentally Friendly Production of Pulp and Paper

Journal of Industrial Ecology 13:15—46. Third International Conference in Biotechnology in Pulp and Paper Industry, Stockholm, Sweden, p66-69. For the first forty years of its existence the Technical Section published annual Proceedings, initially as a single volume and ultimately in three volumes per year, which contained technical papers read at numerous local, regional and national meetings.
