Volume 37 Issue 1

Finally, after leaving the snails they burrow into the skin of fish and form a cyst. Neurocysticercosis Neurocysticercosis occurs via fecal-oral transmission, or when people are exposed to human feces containing the eggs of *Taenia solium*, a pork.

Parasitic Infections of the Central Nervous System

. These fish usually die as the result of natural causes. It can be unilateral or bilateral and may result in complete or partial blockage.

Acanthocephalans in Small Animals

There is no practical way to control fungus in pond situations. A similar study with the same tissue collection and culture protocol was done using six seropositive cattle from a B.

Diseases of Llamas and Alpacas

One adult animal with a retained placenta had recently aborted.

DNR: Fish & Wildlife: Fish Disease

Most severe losses occur when fish are stressed due to unfavorable conditions, such as poor water quality.

Parasitic Infections of the Central Nervous System

Little air movement is heard under normal conditions, and identification of areas of infection, congestion, or consolidation is typically difficult. The most consistent clinical sign in chytrid-exposed frogs was excessive shedding of skin. Diarrhea in adult SACs is relatively rare but often

accompanies a change of feed.
