Performance Parts Canada

Performance is optimized when the lowest octane rated fuel that can be used without detonation is used.

Civil Aviation Fuel

Even if that sounds like something Gwyneth would say. In the , gasoline is often available without any blend of ethanol, but only up to 91 AKI.

Performance Parts Canada

In most areas, the standard grades are 87 regular , 89 mid-grade and 91-94 premium AKI. One member of the octane family, isooctane, is used as a reference standard to benchmark the tendency of or fuels to resist self-ignition.

Fuel Cell & Clean Energy Solutions

RE85 is only suitable for cars that can run on high-percentage ethanol. By definition, any product meeting Check List requirements will also meet either DEF STAN or ASTM specifications. The original testing was done in cars on the road but as technology developed the testing was moved to chassis dynamometers with environmental controls to improve consistency.
