For though in both his specimens the Digitized by Google 14 MR ATKINSON. The branching forms, seen in , have scarcely so great a range. The Huronian was first recognised by Sir W.

## Full text of to the collection of fossil fishes in the Department of Geology and Palaeontology, British Museum (Natural

In these fishes the skeleton is notochordal, there are a pair of pterygo-palatine teeth, and a pair of incisor-like vomerine teeth above, and a third pair of teeth in the lower jaw Fig. Henrietta Maria, Queen of Charles T.

## Literature relating to fossil coelacanth

Catherine Par, sixth Queen of Henry VIII. The first few vertebrae differ from the others in having very short centra and no ventri-lateral processes.

## I. Ganoidei

On the whole, they do not strike the observer as very dissimilar from those of modern times.

## The Chain of Life in Geological Time, J. William Dawson

. At the outer edge of the pelvis it divides into three strata, of which one passes externally between the pelvic muscles and the edge of the lateral muscle, and is connected with the skin: a second stratum passes upon the upper or deep surface of the fin, meeting its fellow of the opposite side, and so forming a continuous sheet which strengthens the part and prevents the protrusion of the viscera; while a third or middle stratum passes between the pelvic muscles to the outer edge of the pelvic bone and is blended with it, so establishing a direct continuity between this internal membranous sheet and the pelvic bone, like that which exists between the corresponding sheet in the caudal region and the interspinous bones.

## **Devonian System**

Summoning Hull to surrender; Sir John Hotham from the wall acquaints the King that he durst not open the gates.
