### Renewable Energy Options

Electrical capacity of pulp and paper co-generation was 3,427 MW, while heat capacity was 1,348 MW.

### Benefits of Renewable Energy Use

Some examples of this include stagnation of water, fish migration issues, uprooting of communities, habitat loss and possible extinction of species.

### Canadian Centre for Energy Information

If you would like to keep up on the electric car theme, you can get a complete list of the 29 transportation companies I am following. To change or withdraw your consent choices for Investopedia. Wood is still the most common source of biomass energy, but other sources of biomass energy include food crops, grasses and other plants, agricultural and forestry waste and residue, organic components from municipal and industrial wastes, even methane gas harvested from community landfills.

### About Renewable Energy

The largest wind farm is Lac Alfred with 300 megawatts.
