Early diagnosis of dementia: neuropsychology

Patients may be depressed early in the disease and the mood changes often predate amnesia. Patients with DLB usually have less hippocampal atrophy than patients with AD, but more so than control subjects.

Alzheimer's Disease and Related Dementias

But there are a few other simple tests that can be quite telling.

Dementia & Alzheimer's

The dementia syndrome associated with HD involves early onset behavioral changes such as irritability, untidiness, and loss of interest. Sensitivity of revised diagnostic criteria for the behavioral variant of frontotemporal dementia. Learn what communities, the public health workforce, health care professionals, and decision-makers can do to improve the lives of people who live with these illnesses.

Alzheimer's Symptoms & Treatment

The narrowing of the window of visuospatial attention has been demonstrated with the Useful Field of View UFOV paradigm in which reaction time to peripheral visual targets is measured in the presence of various levels of distracting visual stimuli. Among people ages 65 and older, the largest percentage of those with the diseases were African Americans 14 percent, followed by Hispanics 12 percent, and non-Hispanic whites 10 percent. Familial forms of pick complex dementia are linked to chromosome 17q.

Neuropsychology 101 for Patients with Alzheimer's or Dementia

Alzheimer's Disease and Other Dementias Dementia Dementia is not a specific disease, but rather a general term for a gradual and progressive decline in mental and physical functions.
