Neuroscience, Brain & Mind

All neurons relay information to each other through a complex electrochemical process, making connections that affect the way we think, learn, move, and behave. Dopamine is associated with attention, learning and pleasure Figure 3: A view of the synapse between neurons It is amazing to realize that when you think—when you reach out to grab a glass of water, when you realize that your best friend is happy, when you try to remember the name of the parts of a neuron—what you are experiencing is actually electro-chemical impulses shooting between nerves! What, in your opinion, are the potential benefits and considerations? The motor output extends to smooth and cardiac muscle as well as glandular tissue.
