## Hospital Pharmacy Standards Handbook

Wales, not shown in , shows similar patterns of differences between area types; however, the variations in income between area types tend to be smaller in value. Inactivity covers a broad range of circumstances. Alternatively, fertility rates may have differed in the past between urban and rural areas and then converged; however migration seems a more plausible driver of this pattern.

## British voluntary hospitals, 1871

Older people remaining in hospital are less likely to gain further independence and are more vulnerable to hospital-borne infections.

## National Health Service

This is regardless of whether they derive a salary or wage from the organisation, or receive any type of funding or assistance from the organisation for the purposes of working overseas.

## Acute hospital dementia care: results from a national audit

Of all urban local authorities, the City of London has an exceptionally high density of 37 jobs per resident aged 16 to 64; Westminster is next highest at 3. Sparse areas differ in their labour market characteristics from rural areas.

## A comparison of hospital administrative costs in eight nations: US costs exceed all others by far

However, all overlapping combinations containing chronic kidney disease + hypertension, or diabetes + hypertension, made up a significant proportion of total secondary care costs for patients with multimorbidities.

## **Hospital Pharmacy Standards Handbook**

Discharge planning was quite poor; the majority of planning 72 % was not initiated within 24 h of admission, and only 39 % of patients had a single detailed plan for discharge in their charts. Seagrove AC, Alam MF, Alrubaiy L, Cheung WY, Clement C, Cohen D, Grey M, Hilton M, Hutchings H, Morgan J, Rapport F, Roberts SE, Russell D, Russell I, Thomas L, Thorne K, Watkins A, Williams JG. The impact of dementia on length of stay in acute hospitals in Ireland.
