Finally, using structural equation modeling, we tested if the relationship between significant situational factors i. Ma HW, Dan X, Xu SH, et al.

Raporty organizacyjny: „High Fidelity Patient Manikin versus standardized patient”

Therefore, we assume that there may be a certain relationship between self-efficacy and NPPB.

Association between self

Altruism, the values dimension of caring self-efficacy concept in Iranian pediatric nurses. Meanwhile, an emphasis should be placed on the nursing professional development for paediatric nurses, including the clinical decision-making patterns for pediatric nurses.

Book chapters: 'Occurrence registration'

Future studies should consider both subjective and objective data on GSE, POS, NPPB and NPE.

Psychological and physiological stress and burnout among maternity providers in a rural county in Kenya: individual and situational predictors

Approval for the study within Migori was granted by the County Commissioner and the County Director of Health. Cochrane R: The social creation of mental illness: Addison-Wesley Longman Ltd; 1983.

Book chapters: 'Occurrence registration'

Introduction to structural equation modeling: issues and practical considerations.

Psychological and physiological stress and burnout among maternity providers in a rural county in Kenya: individual and situational predictors

Second, the questionnaires might not truly reflect the thoughts of paediatric nurses due to the self-reported nature of the study. We did not test the mediated effect of perceived stress on the physiological measures because they were not correlated in bivariate models. Both individual and work-related factors contributed to this high stress and burnout.
