The Chemistry of the Halogens

The electrons in magenta formed a new bond between the carbon on the right and my halogen, like that. Diethylether adduct, $C_2H_5_2O:BF_3$, is a distillable liquid and is used as a common reagent.

The Chemistry of the Halogens

Govindasamy Muges HALCHEM VII: at Czestochowa, Poland 2015 : Chairperson Prof.

Alkene halogenation (video)

The compilation further considers pentahalides of transition metals and halide chemistry of chromium, molybdenum, and tungsten.

Properties of the Halogens

The hexahydrate is red and is a coordination compound in which water molecules are ligands.

Halogen Uses

Sulfur hexafluoride, SF_6 , is a colorless and odorless gas mp -50.
