So, chemical rockets weren't powerful enough, and nuclear engines, though they were twice as efficient, ran far too hot and had other drawbacks. NASA For the standard Orion, it would take 800 bombs unleashed over a six-minute period to push it into a 300 mi 483 km orbit. Some, like the Mini-Mag Orion, use superconducting coils to compress fissile material. It was the fact that the radio telescope discovered innumerable invisible sources thus creating an entirely new map of the heavens which has since allowed the exploration of space on a larger scale than ever before, and made this new instrument of scientific research so important.
