A computer program for least squares adjustment using combined observation and condition equations. (1980 edition)

This paper both answers the question and gives algorithms to solve it. However, the reference dynamics do not generate a specific reference trajectory for feedback regulation for any agent.

CDC13 Program

In addition, the paper presents a new concept that gives a positive indication when coverage is achieved. Add to My Program Chair: Univ.

Least Squares Fitting

To accomplish this goal, first a novel symbolic computational method for the linearization of a nonlinear system is developed such that the obtained linear models are subjected to the symbolic fault variables.

CDC06 Program

Such problems arise in mathematical economics, in robotics swarms of mini-robots.

ECC'14 Program

The force control allows then to generate the control inputs that maintain the cables under feasible tensions. These results are then combined with recent developments in polynomial optimization to construct a nested sequence of sufficient conditions for stability which are expressible as semidefinite programs and which are of non-decreasing accuracy.

CA2506118C

The time stepping flow of the ensemble Kalman smoother filter used in CTDAS-Lagrange.
