## 10 Popular Scientific Discoveries from 2019

Geography is the study of the terrestrial surface, including how it forms, what landscapes exist, and how animals and humans populate and use it. If they commit us to numbers and other abstract objects whose existence cannot be established without them, then they are arguably doing more than definitions should.

## Naturalism (Stanford Encyclopedia of Philosophy)

This is because of natural science. But the mere fact that everyday thought contains a concept of such a state in itself provides no motivation for further investigation. Let us now turn to the second issue flagged above.

## The Humanities Vs. The Sciences: Who Wins Out?

It is granted that the behavior of animals can be investigated without appeal to consciousness. Overall, the natural sciences fall into one of two central branches: the life sciences and the physical sciences.

## Perception, Language & Natural Sciences

Researchers discuss and investigate which of their ideas best explains what the world is like, because they have different ideas about it and also believe that two incompatible ideas cannot be simultaneously true.
