### Disinfection & Sterilization Guidelines

II Do not use a lower category of disinfection or cease to follow the appropriate disinfectant recommendations when using probe covers because these sheaths and condoms can fail.

### Sterilization and Disinfection

Studies on the bioburden on medical devices and the importance of cleaning. Preoperative patient preparation, management of the colonizers, correct surgical technique, adequate antimicrobial prophylaxis, adequate sterilization and disinfection of the environmental surfaces, proper aseptic techniques, as well as washing surgical hands before and after the operative procedure are various preventive measures that can be taken to reduce the incidence of SSIs. By using a combination of chemical and mechanical analysis techniques, both manufacturing and decontamination processes can be optimized to ensure a safe and effective product.

### Sterilization and Disinfection

Spores may be able to survive and result in germination and hence contamination. Conduct infection control rounds periodically e. Disinfect or clean environmental surfaces on a regular basis e.

### Sterilization and Disinfection

Ensure that the detergents or enzymatic cleaners selected are compatible with the metals and other materials used in medical instruments.

### Cleaning, Disinfection, Sterilization: What Are The Differences?

A disinfectant is a chemical agent used for the process of disinfection. Filters with an efficiency of 20—40% are adequate at the entry side.

### Sterilization and Disinfection

In Europe, HAIs contribute approximately 16 million extra stays in the hospital and 37,000 deaths per year.

## **IntroductionDisinfection & Sterilization Guidelines**

In health-care settings, objects usually are disinfected by liquid chemicals or wet pasteurization.
