Jurassic Period

Heavy border denotes modification in UA pattern compared with left column, circled UA number denotes levels of critical error. The accuracy of climate reconstructions depends on knowledge of all processes affecting water vapour, precipitation and snow isotopic compositions.

Full text of geography: a study of site, evolution, pattern and classification in villages, towns and

In the Precambrian, age determinations are now commonly available and provide an adequate basis for correlation.

On the palaeogeographical distribution of the pectinid genus weyla (bivalvia, lower jurassic)

Mineralogical Data for Greywackes and Greenstones the Cache Creek Group. This depression, or trough, only about 3 to 5 meters 10 - 15 feet deep and about 5 kilometers 3 miles wide, was likely caused by collapse of limestone caverns preferentially above the crater rim, resulting in an arcing chain of sinkholes. Originally the post was erected in 1917 on the south bank of the distributary, here about 300 yards wide; but it was transferred to the north bank about 1920, It occupies a rounded pro- montory jutting to the south-east, and the main road borders the shore in the form of a crescent.

shandong peninsula north: Topics by Science.gov

A minimum age of 189. A total of 22 fish species and five invertebrate species were recorded over the year.

Lower Jurassic rocks and fauna near Ashcroft, British Columbia and their relation to some granitic p...

It will be of interest to many geographers to see what determined the writer to adopt the classification and order which is described in his book.

Since no magnetic time units had been defined for the Paleogene, it was necessary to develop a nomenclature to accommodate the new material. The sandy knoUs are now large farm wood-lots.
