Bacon calls the second approach induction, not in the meaning later given to the term by the empiricist tradition of Hume and Popper. We analyze theoretically and empirically with which adult child parents coreside when the extended family has multiple adult children, and we show that this decision-making process can be rationalized. We consider it meaningful to develop an integrated theoretical concept that includes these and other conditions of social denial, exemption, withdrawal, and exclusion from social life at various stages of the life course.
