Cervical Cancer Treatment (PDQ®)

High-grade SIL may also be called moderate or severe dysplasia, CIN 2 or 3, or carcinoma in situ. In CIN 2, proliferation occurs up to the upper two thirds, and in CIN 3, proliferation occurs in the upper two thirds of the epithelium. The cells are viewed under a to find out if they are abnormal.

Cervical Cancer: Types of Treatment

Immunotherapy Immunotherapy, also called biologic therapy, is designed to boost the body's natural defenses to fight the cancer. PDQ is a service of the NCI. Cervical dysplasia, pre-invasive cervical disease, cervical intrepithelial neoplasia CIN , and cervical adenocarcinoma-in-situ AIS 1.

Cervical Pre

For women age 30 to 65 years, Pap and HPV testing is recommended every 5 years. Most side effects usually go away after treatment is finished.

Cervical Cancer: Introduction

Shared decision making is particularly important for cervical cancer because there are different treatment options. It can also help prevent more serious problems in the future.

Cervical Cancer Treatment (PDQ®)

Clinical trials can be found online at. In stage IB3, the cancer is larger than 4 centimeters. The cancer spreads from where it began by growing into nearby areas.

Cervical cancer

The loops are available in a variety of shapes and sizes, allowing individualization of the cone specimen removed in order to avoid excessive excision. Radiation therapy is a cancer treatment that uses high-energy or other types of to kill cancer cells or keep them from growing. Precancer

cells of the cervix seldom cause pain or other symptoms.

Cervical Pre

Patients may want to think about taking part in a clinical trial. Doctors use this information to plan treatment and to monitor progress. Some clinical trials only include patients who have not yet received treatment.
