GeoLog

Chu, Investigating Basal Thaw as a Mechanism of Ice Mass Loss in Antarctica, AGU Fall Meeting, Online, December 1st — 17th. Use of a parsimonious rainfall-runoff model for predicting hydrological response in ungauged basins. Box 5 As president from 1975 to 1979, Uwe Radok Australia; Box 6 , focused ICSI priority on the role of ice and snow in the climate system, with this leading to the ICSI-sponsored Symposium on Sea Level, Ice and Climate Change at the 1979 general assembly of the IUGG in Canberra.

Melting Antarctic ice will raise sea level by 2.5 metres

It collectively describes the components of the Earth's surface that contain ice, including snow, glaciers, ice sheets, ice shelves, icebergs, sea ice, lake ice, river ice, permafrost and seasonally frozen ground.

The summer radiation and heat budget of the Arctic and Antarctic

In 1985 Mark left the US Geological Survey to become the Director of the Institute of Arctic and Alpine Research at the University of Colorado. The difference in the definition for the same sample did not exceed 0.

Antarctic Glaciers

This proposal was not, however, accepted. Gerald Gerry Jones president-elect, 1999—2001, Box 8 who coordinated the first steps in the successful transformation of the ICSI into the IUGG Association of Cryospheric Sciences IACS.

Presentations

Schroeder, Geostatistically simulating subglacial topography with synthetic training data, IEEE Symposium on Geoscience and Remote Sensing, Waikoloa, September 26th - October 2nd. Glacial geoengineering and the Antarctic Treaty System No cryoengineering or mega-adaptation building project could be authorized under the ATS.

Study: Mass gains of Antarctic ice sheet greater than losses

The IUGG EC responded positively, although it requested that more details on the proposal should be submitted to its next meeting and recommended that an interim inter-association commission be established before a new fully independent association. This proposal was agreed to, even before the general assembly. We want to give our gratitude to all members of the glacial party of Moscow State University, who were working at the Djankuat glacier station during 2007—2017, amounting to more than 100 people in total.

Trevor Chinn (glaciologist)

Photos of a the weather station on Hochjochferner in September 2017, b the customs hut as seen from the AWS site in September 2016, and c panoramic view of the customs hut and Hochjochferner in 2017.

M.F.Meier

According to the new analysis of satellite data, the Antarctic ice sheet showed a net gain of 112 billion tons of ice a year from 1992 to 2001. As climate change completely restructures hydrological processes and ecosystems in alpine areas, monitoring is fundamental to adaptation. The climate is moderate continental to high alpine.
