They may be in the form of powders, films or composite materials. Applied Surface Science 2018, 433 , 232-239.

The friction and lubrication of solids / by F.P. Bowden and D. Tabor

Covalently grafting of self-assembled functionalized graphene oxide multilayer films on Si substrate for solid film lubrication.

The Friction and Lubrication of Solids

Chemically active lubricants include EP and AW additives and other chemicals which interact with the metal surface to produce a lubricating or protecting layer. Solid lubricant friction is a special form of friction which occurs when using solid lubricants. The main purpose of solid lubricants is to build up a continuous adherent soft or hard film in the rubbing surfaces.

The Friction and Lubrication of Solids (豆瓣)

In concept, the SPF press and die technology used to form these alloys are very similar, but the forming temperatures are quite different.
