Alan Miller's Fortran Software

One of these relates the number of elementary mental discriminations required to implement an algorithm to measurable properties of that algorithm, and the results of one set of experiments confirming this relationship have been published.

Statistics and R

MAT 152 Calculus A The first course in a three-semester sequence covering basic calculus of real variables, Calculus A introduces the concept of limit and applies it to the definition of derivative and integral of a function of one variable. It is used in a few various applications such as OS and game development.
