Week 4: Medicine and the Enlightenment

Improvements in drugs and medical technology, and the steadily increasing number of professional personnel employed by hospitals and health centers, led to dramatically increased costs for medical and health care during the last half of the century.

Publications

To feed locomotives and the furnaces of homes and industries, Texans needed the coal that was taken from fourteen mines in the vicinity of Thurber, a town owned by the Texas and Pacific Coal Company. . During this period, he voraciously ingested fatty meats three times a day, consumed large quantities of butter and cheese, and drank strong ale.

Right Living: An Anglo

A new law permitted workers to be compensated for work time lost because of injuries. London: Routledge, 1990 , pp. As Galveston rapidly became the state's largest city during the 1870s, Galvestonians proudly supported the opening of a new City Hospital in 1875 and a large addition to St.

Right Living: An Anglo

After 1870, public authorities developed stable institutions for supervising sanitation, quarantine, water sources, and food inspection. Apache Indians mashed poison ivy leaves to prepare a remedy for ringworm.

Right Living by Charles E. Rosenberg

The most outstanding feature of health care during the twentieth century has been the remarkable increase in longevity resulting from improvements

in public health, medical treatment, and ways of life. Deductions from each worker's paycheck were used to pay the costs of medical care given by the company doctors.
