In the FINEX process, fine ore is reduced to 80-90% metallic iron in a series of fluidized beds, and the remaining iron oxides are reduced, carburized, and liquified with the formation of a slag in a melter-gasifier, which is analogous to that employed in the COREX process. Up with your pike and fork! Accordingly, compositions have been developed for such materials which exhibit four to to eight times the atmospheric corrosion resistance of structural carbon steel. Thus the hearsomeness of the burger felicitates the whole of the polis.
