Lake Tuscaloosa

No oil or gas has been produced from the basin or from nearby areas in southwestern Montana, but oil and gas have been produced from the same favorable formations elsewhere in Montana. Ashland, Ohio; University Post Pub. Groundwater movement through the extensive tailings deposits in the Whitewood Creek valley enter the creek at various seeps along its downstream course to the Belle Fourche river, and the Belle Fourche River itself, which empties into the Cheyenne River and eventually into Lake Oahe.

In addition, the species likely has a limited ability to disperse and, therefore, may not be able recolonize areas from which it has been extirpated. About 40 to 80 percent of total PCB concentrations depending on how total PCB concentration is computed in suspended sediment exceed the threshold effect concentration, a concentration below which adverse effects to benthic biota rarely occur.
