## Cattle and their diseases (1863 edition)

Internal parasites Hairworms The gastrointestinal tract of cattle is often infected with hairworms, also called stomach worms and intestinal worms. Bulls also may be infected by breeding infected cows. Antibiotics are used to treat leptospirosis.

## Common Viral Diseases of Cattle

The vulva is swollen, then ulcers may be present on the surface. Affected cows may conceive and not return to heat 21 days later. It causes repeat breeders, low-grade uterine infections, abortions, mastitis and occasionally systemic infection.

## Reproductive Diseases in Cattle

The virus has seven different serotypes O, A, C, Asia1, SAT-1, SAT-2, and SAT3 and is distributed worldwide. Stress, physical injury or infection from bacteria or other microorganisms can be a cause for mastitis in cattle. Before vaccinating, consult a veterinarian for advice on the vaccination procedure for a particular herd.

## Cattle Diseases

Bovine Viral Diarrhea -BVD is most common in young cattle between the ages of 6 and 24 months. Of the five or more strains of the organism, the three most common causing problems in cattle are *Leptospira pomona*, *Leptospira hardjo* and *Leptospira grippotyphosa*.
