Hematology: Tests, treatments, and relation to oncology

The depth of knowledge of the specialists and the state-of-the-art diagnostic facilities allow Mayo Clinic experts to reach diagnoses that are difficult for complex or unusual conditions. CML does not always cause symptoms right away.

What Are Common Hematology Tests?

Cholesterol Testing High levels of cholesterol have been linked to heart disease and other potentially fatal conditions for some time. A lack of iron can affect your body's ability to make red blood cells. Note: In eCare, you can book with a provider you have seen in the last three years.

Blood Disorders

Spine Tumor STEP is dedicated to providing the highest level of care for patients with malignant or benign spine tumors through all phases of the treatment process. We offer comprehensive clinical care and research programs in both non-malignant and malignant hematologic diseases.

Hematology

These insights are translated into clinical trials that seek to selectively eliminate tumor cells using targeted therapy. It creates an abnormal gene called BCR-ABL.
