## **The impact of atmospheric deposition on the aquatic ecosystem with special emphasis on lake productivity, Newfoundland, Canada**

Natural disturbance The dynamics of natural disturbance regimes, such as fire and native insect outbreaks, are changing and this is reshaping the landscape. Selected Water Resources Abstracts is designed to serve the scientific and technical information needs of scientists, engineers, and managers as one of several planned services of the Water Resources Scientific Information Center WRSIC. Cultivated areas are small and contribute little to the economy of the Ecozone +.

## **Effects of acidification on the availability of toxic metals and calcium to wild birds and mammals**

Some of these are declining in number and distribution, some are stable, and others are healthy or recovering.

## **Paleolimnological diatom studies of acidification of lakes by acid rain: An application of quaternary science**

Beiträge zur biologie der Schlesischen lachmöwen kolonien.

## **Science, Faculty of > Biology**

Structure and composition of edges next to regenerating clear-cuts in mixed-wood boreal forest. Gaseous inputs calculated as  $\text{SO}_2$  were 50-70% of bulk deposition at Sudbury North and South and approximately equal at Sudbury Center. Regional calibration of fossil diatom—contemporary pH relationships for insular Newfoundland, Canada, including historical pH reconstruction for five lakes with an assessment of palaeo-inferred productivity changes in one lake.
