

Evaluation of the use of commercially available freeze-dried porcine skin in the treatment of human mucogingival problems

Faculty of Dentistry, University of Toronto - Efficacy of a novel intradermal *Lawsonia intracellularis* vaccine in pigs against experimental infection and under field conditions

Description: -

-Evaluation of the use of commercially available freeze-dried porcine skin in the treatment of human mucogingival problems

-Evaluation of the use of commercially available freeze-dried porcine skin in the treatment of human mucogingival problems

Notes: Thesis (Dip. Periodont)--University of Toronto, 1983.

Scar-free healing: from embryonic mechanisms to adult therapeutic intervention.

Food Science of Animal Resources

The collagen and elastin structures and mech.

Skin and Soft Tissue Substitutes

Heberprot-P ® contains 75 µg of freeze-dried EGF and is administered intralesionally three times per week. Histology demonstrated severe foreign body type reaction dominated by neutrophil granulocytes and macrophages in the early explants and a lymphocytic reaction at 1 year. The material samples were evaluated by determinations of their pore size, porosity, biodegradability, freezable water content, and glucose permeability.

Tissue engineering in burn scar reconstruction

Organs 2014 , 17 2 169 — 177 DOI: 10.

A total of 8 studies fulfilled the search criteria and included 635 patients using AlloDerm, Surgisis, and Strattece biologic tissue matrices. According to the manufacturer, its main applications are as a temporary graft for treating burns, partial and full thickness wounds, and chronic wounds including venous stasis ulcers, diabetic foot ulcers, and full-thickness wounds Promethean LifeSciences, 2008.

Progress and opportunities for tissue

The PRRS vaccine was a freeze-dried vaccine and is reconstituted immediately before administration to contain $10^{4.5}$ TCID₅₀ of virus per dose of 200 μ l using the appropriate PCV2 vaccine or a diluent.
