## Periodontal Diseases

Smoking makes it harder for your immune system to fight off infection, making those that use tobacco both at a higher risk for gum disease and more resistant to treatment. But that doesn't mean bleeding gums are normal or should be ignored.

## Periodontal disease

Brushing at least twice a day, flossing daily and getting regular dental checkups can greatly improve your chances of successful treatment for periodontitis and can also reduce your chance of developing it. If it's left untreated, the disease will continue and the underlying bone around the teeth will dissolve and will no longer be able to hold the teeth in place.

## Periodontal Diseases

Records from China and the Middle East, along with archaeological studies, show that mankind has suffered from Periodontal disease for at least many thousands of years. Refu'at Ha-Peh Veba-Shinayim in Hebrew. However, such treatments do not address calculus formations, and so are short-lived, as anaerobic microbial colonies quickly regenerate in and around calculus.

## Periodontal (Gum) Disease

It is not sure whether some antibiotics are better than others when used alongside scaling and root planning. For crooked or crowded teeth, they might also recommend orthodontic treatment.

## Periodontitis

Some people are genetically prone to periodontal disease than others, but that does not make it inevitable. Journal of Indian Society of Periodontology. Calculus above and below the gum line must be removed completely by the dental hygienist or dentist to treat gingivitis and periodontitis.

## **Periodontal diseases**

In its more serious form, called periodontitis, the gums can pull away from the , bone can be lost, and the teeth may loosen or. In the worst cases of periodontitis, bone loss is so severe that the tooth cannot be saved and must be removed. Infection in your gums may increase the risk of clogged arteries and even worsen existing heart conditions.
