Lighting Design Guidance

Size and availability of space are two of the most common factors influencing feasibility of biophilic design patterns.

26 50 00 LIGHTING

The impact of daylight on performance, mood and well-being has been studied for many years, in a variety of environments, and as a complex field of science and design, light has been extensively studied and written about. These groups simply utilize and interact with nature in ways that are compatible with their culture and needs. Blue Space: The Importance of Water for Preference, Affect and Restorativeness Ratings of Natural and Built Scenes.

14 Patterns of Biophilic Design

Alternative power sources such as solar panels or battery-operated lighting are appropriate in areas where power is not always easily accessible, such as informal developments. Discussed here in brief are some key perspectives that may help focus the planning and design processes. Environ Health Prev Med 15:27—37.
