Even more recently extinct, island  
dwelling crocodilians

Filesize: 27.74 MB

The deltopectoral crest of the humerus is comparatively thick, with a prominent common attachment scar for M. The fourth trochanter and associated attachment scars for the caudofemoralis musculature on the sigmoid femur are especially prominent, and the trochanter itself takes the form of an acute crest rather than a low prominence. Sexual selection and the mismeasure of color.
