## UNIT 3

Program-specific outcomes Use foundational business principles to evaluate and solve problems for software applications. For writing and erasing data on the EPROM, we need a particular device which is known as PROM programmer.

## information processing

The problem with Babbage's and other mechanical calculators was just that—they were mechanical. Writing the program usually took more time than doing whatever it was that you had originally wanted to do writing the letter.

## Computers, Data and Information

The latter combine to form symbolic expressions that constitute inputs to or outputs from information processes and are stored in the processor memory.

## Introduction to Information Processing

To flip a digital photo, the computer simply reverses the sequence of numbers so they run from right to left instead of left to right. There's usually a large cooling fan on the outside of the computer case near the power socket or a much smaller fan on a laptop, usually on one side. These events

are similar as in case of For a computer to perform useful work, the computer has to receive instructions and data from the outside world.
