C, are mentioned, all of which promise interesting data in this investigational work. *Lactarius pallescens* has a viscid to slimy, white to grayish or grayish vinaceous cap, whitish gills that may be slightly decurrent, and viscid to slimy white stipe that is shiny when dry. However, for this species, we also use oocyte size as an auxiliary tool since most oocytes were in stages I-III and were histologically very similar.

CP

Cantharellus subalbidus SAT-05-259-05 *Craterellus tubaeformis* SAT-01-276-14 *Gomphus clavatus* SAT-00-250-13 *Gomphus floccosus* SAT-00-250-13 *Gomphus floccosus* Schweinitz Singer WOOLY CHANTERELLE Not truly wooly, *Gomphus floccosus* is more accurately characterized by the coarse scales that usually line its deeply vaseshaped cap; however, it is a highly variable fungus, and the degree of scaliness is by no means constant. The head crown bore 31 collar spines, arranged in a single row.

scientific program

Flowers and bees were censused biweekly. Indigenous fishes are 85% endemic. Battelle Memorial Institute, Columbus, OH.
