The eyes as a window to improved understanding of the prenatal effects of Zika virus infection.

This segregated state is maintained as long as the mixed halide film is irradiated continuously with visible light. The original users of PharmGKB were researchers looking to discover new connections between drugs and genes. Employing transient absorption spectroscopy, we have succeeded in tracking this transformation and gain insight into the interplay between the solid-state precursor and perovskite phases at various stages of formation.

Kajian teknologi High Altitude Platform (HAP) [Study of High Altitude Platform (HAP) technology]

In a quest to explore new inorganic hole conducting materials for these perovskite based thin film photovoltaics, we have identified copper iodide as a possible alternative.

Publications

The thermal conductivity in CH₃NH₃PbI₃ neat film decreases with temperature.

Publications

We employ impedance spectroscopy to examine the mobility of charge carriers through each of the layers. Specifically, the feature article focuses addresses three main issues: i How surface chemistry affects the optical properties of QDs, ii How it influences the excited state dynamics and iii How one can manipulate surface chemistry to control the interactions between QDs and metal oxides, metal nanoparticles and in self-assembled QD monolayers.

Publications

Such charge-discharge phenomenon on the graphene oxide sheet was further probed by carrying out reduction of methyl viologen.

Pharmacogenetic Resources: PharmGKB and Clinical Pharmacogenetics Implementation Consortium

Such a unique dual frequency arrangement operating in tandem, yields large exfoliated graphene sheets with platinum nanoparticles dispersed on them. Stern, Ming Wang, Henning Sirringhaus, Thuc-Quyen Nguyen, Jean-Luc Brédas, Guillermo C. The research is conducted to gather HAP potential for broadband communication and its development in Indonesia.

The eyes as a window to improved understanding of the prenatal effects of Zika virus infection.

It also helps to improve the impact factor for Adv. This causes a decrease in absorption across the visible region of the spectrum and a distinct change in the crystal structure of the material.
