Pediatric Nurse Practitioner

Titration of drug to effect is an important concept; one must know whether the previous dose has taken full effect before administering additional drug. The coursework and diverse clinical experiences prepared me for my current role.

Human Trafficking of Children: Nurse Practitioner Knowledge, Beliefs, and Experience Supporting the Development of a Practice Guideline: Part Two

Moderate and deep sedation or general anesthesia may be achieved via any route of administration. In addition, federal law appears to prohibit NPs from prescribing Suboxone for treating drug dependence. For prolonged absences, it is preferred if the resource person is identified in the written practice agreement.

Pediatric Primary Care NP Exam Sample Questions

Category A evidence represents results obtained from randomized controlled trials RCTs , and category B evidence represents observational results obtained from nonrandomized study designs or RCTs without pertinent comparison groups. As described in more detail below, this law requires each NP to practice in accordance with written practice protocols and a written practice agreement with a collaborating physician. Clinical outcomes in this population are greatly affected by initial treatment guidelines.

Pediatric Primary Care NP Exam Sample Questions

To respond to the sample questions, first enter your first and last names in the boxes below this information will not be recorded; it is strictly for purposes of identifying your results. Answer: New York State Education Law authorizes each NP to prescribe controlled substances from Schedules II through IV for patients only within the specialty area of practice for which the NP is certified by the New York State Education Department.
