## Demography and Life Histories of Sympatric Patas Monkeys, *Erythrocebus patas*, and Vervets, *Cercopithecus aethiops*, in Laikipia, Kenya

Primateologists come from many different disciplines and study primate behavior for different reasons. Why Do Primates Live in Groups? In Brazil, saddle-back tamarins obtain a slightly different foraging benefit by associating with moustached tamarins.

### Vervet Monkey

Adult males give specific vocalizations during threat displays and physical confrontations.

### Ethology and Ecology of Sleep in Monkeys and Apes

Benefits of Dispersal If the costs are so high, why do individuals disperse at all? Although more rare than male-male competition, sometimes females compete for mates.

### Course Outlines

The primary causes of this decline were habitat loss and illegal hunting.

### Kenya's Elusive Patas Monkeys

We do not see baboons in this area but we do hear them calling from their night sleeping sites.

**Jill D. E. Pruetz (ed): The Socioecology of Adult Female Patas Monkeys and Vervets in Kenya**

Natal group: The group into which an organism is born. The common genet *Genetta genetta* that we spot during a nocturnal survey in vegetation along the Suam River, gives us good looks before climbings up into dense vegetation. The five distinct subspecies can be found mostly throughout Southern Africa, as well as some of the eastern countries.
