**Age**

Counties with above average increases were located predominantly in the northern and western United States. In some cases significantly lower values as compared to the nation-wide benchmark were found.

**The Countries Of Northern Europe**

Gillespie had no role in the design and conduct of the study; collection, management, analysis, and interpretation of the data; preparation, review, or approval of the article; and decision to submit the manuscript for publication. Age plays an important role in the analysis of mortality because it is a significant predictor of mortality and an indicator of at-risk age groups.

**Spatial**

The capital and largest city in Latvia is Riga which is home to about a third of the country's total population.

**Web**

Standardized hospitalization ratios SHR are then defined for every municipality as the ratio between observed and expected events. The random effects  $\gamma_1$ ,  $\gamma_2$ ,  $\gamma_3$ , and  $\gamma_5$  were assumed to follow conditional autoregressive distributions, which allow for smoothing over adjacent age groups and years  $\gamma_1$  or counties  $\gamma_2$ ,  $\gamma_3$ , and  $\gamma_5$ . Its population is estimated to stand at 5,540,720 residents.
