Main Digest Humans have two kidneys, each about the size of your fist. Diabetes happens when your blood sugar is too high, causing damage to many organs in your body, including the kidneys and heart, as well as blood vessels, nerves and eyes.

Chronic kidney disease

This condition occurs when excess sodium and water retention in the body due to CKD results in vascular congestion.

Kidney Disease

There is one kidney on each side of the spine. In severe cases, renal artery disease may lead to kidney failure.

Kidney and Urinary Diseases

Kidney infections can be treated with antibiotics if the infection is caused by bacteria. Most people have three sessions per week, with each session lasting three to five hours. Some people have to eat less salt and protein until the kidney can remove these substances from the blood properly.

Kidney Health and Kidney Disease Basics: Causes and Questions

Ultrasound or computed tomography CT Scan and produce clear images of your kidneys and urinary tract.
