## The ADA Practical Guide to OSHA Compliance Manual

It covers bloodborne pathogens, hazard communication, waste management, and other regulatory issues. Summary All individuals performing work with hazardous chemicals must accept a shared responsibility for operating in a safe manner once they have been informed about the extent of risk and safe procedures for their activities.

## OSHA Resources

As a general rule, all chemical containers found on the MSU campus should be properly labeled. The toolkit is designed to walk employers and workers, step-by-step, through information, methods, tools, and guidance to either eliminate hazardous chemicals or to make informed substitutions by finding a safer chemical, material, product or process. Copies of this training manual are available within your department or through the EHS web page.

## Employee's Guide to MSU Hazard Communication Standard

To this end, Environmental Health and Safety EHS has developed and implemented the Michigan State University Hazard Communication Standard in accordance with the requirements of the Occupational Safety and Health Administration OSHA. In order to implement such a program, management must be committed to its execution, and it must involve hazard assessment, technology, equipment to control hazards, and training of front line workers.

## The ADA Practical Guide to OSHA Compliance Manual

If labels are removed or damaged, they must be replaced by the user. Texting while driving dramatically increases the risk of motor vehicle crashes and is the leading cause of worker fatalities. Whistleblower Protection Programs While OSHA sees fewer overall deaths in the workplace today, the leading cause of worker fatalities continues to be motor vehicle crashes.
