### Synthesis of donor

The theoretical amount of product was.

### Oligo modification—post

These click chemistry reactions entail coupling azide and alkyne groups through a copper-catalyzed reaction, forming a 1,2,3-triazole. In all cases the Ref. The sweat point of this product was 120.

### Oligo modification—post

The results of the melt-temp showed an overall change in temperature of. The TLC plate also indicated that the product w Spectroscopy was obtained by running an IR and NMR of the 4-morpholin-4-ylsulfonylphenolacetamide product.

### Palladin Oleksandr V.

A modified Pummerer reaction was used to obtain the oxathiazepine ring.

### Total synthesis of (-)

This reaction is thermodynamically favorable, resulting in an irreversible reaction, and it has no side products Figure 4. This could be due to a small amount of water mixed in with the product.

### Synthesis of donor

This was done under a fume hood, using a glass pipet with great caution.

## **Orgo II synthesis Lab**

The resulting crystals, or acetanilide, was a light eggshell color Figure 1. Click chemistry The nature and mechanism of click chemistry was described by Dr.

### **Synthesis of donor**

This shows that our product was a pure substance.
